

1 Machine proposal

$$x_c = 100$$

origin candidate c_1

2 Authorized correction

$$x_a = 101$$

explicit grant a

3 Reviewed instance

$$c_r = c_1$$

identity fixed by a

4 Executed transition

$$c_s = c_1 \rightarrow \mathbf{101}$$

$$c_s = c_2 \rightarrow \mathbf{101}$$

Same proposal value + retained context $\nRightarrow$ same instance

Original grant: context admits c_1 or c_2 ; bound admits only c_1 .
