

Review binds value and instance

Machine proposal

$$x_c = 100$$

origin candidate c_1

Authorized correction

$$x_a = 101$$

explicit grant a

Reviewed instance

$$c_r = c_1$$

identity fixed by a

Executed transition

$$c_s = c_1 \rightarrow \mathbf{101}$$

$$c_s = c_2 \rightarrow \mathbf{101}$$

Review of c_1 authorizes 101 and retains proposal 100.

Equivalent c_2 shares value and context, not identity.

Original grant: context admits c_1/c_2 ; bound only c_1 . New authorization can license c_2 .
