

1 · AI candidate

Candidate certificate c_i

record · field · evidence
producer · context

candidate value x_c
expected pre-version v

non-authoritative · no direct write port

2 · Human decision

bound to c_i + context

Accept · $x_a = x_c$

**Correction
 $x_a \neq x_c$
candidate retained**

Reject

3 · Admission gate

all distinctions + policy must hold

D_C candidate + context
D_V $x_c \leftrightarrow x_a$ attribution
D_F current pre-version
D_B complete batch
D_S total source relation

one version CAS

4 · Successor

**Record $v+1$
complete values
total source map**

audit + reverse trace

Reject or failed check → whole batch rejected; authoritative state stutters

authorization records responsibility, not factual truth
